

Connecting to NorthTec Wireless - Windows 8

Below are the steps on how to connect Windows 8 devices to NorthTec's Wireless Network. Please take note that you will only do this once if you set your device to connect automatically and remember your User ID and password. However, every time you change your password, you need to update the password on your device following the same process.

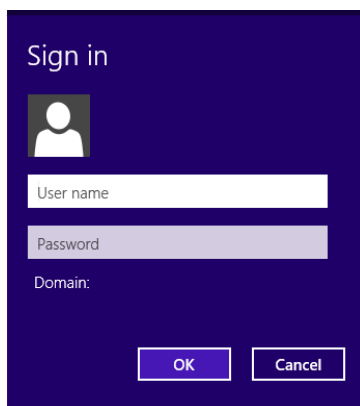

1. At the lower right corner of Windows 8 Desktop, click or Tap on the symbol below to get wireless network options

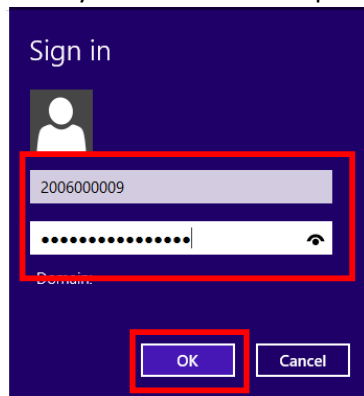

2. Select “_NorthTec” option and click or Tap to connect.

3. Your User ID and Password will now be requested.

Enter your username and password and click or Tap OK

4. You are now connected to NorthTec Network and should have access to Internet Services.
